# TROPICAL CYCLONE BULLETIN NO. 9 Tropical Storm "MARING" (KOMPASU)

Issued at 5:00 PM, 09 October 2021

Valid for broadcast until the next bulletin at 11:00 PM today

# TROPICAL STORM "MARING" MAINTAINS ITS STRENGTH AS IT INTERACTS WITH THE CIRCULATION OF "NANDO"

# Location of Center (4:00 PM)

The center of Tropical Storm "MARING" was estimated based on all available data at 745 km East of Catarman, Northern Samar or 840 km East of Southern Luzon (13.0°N, 131.5°E)

## Intensity

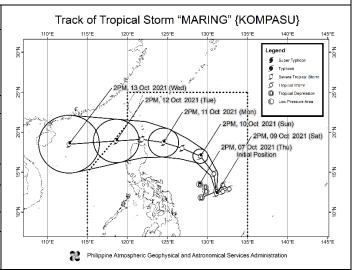

Maximum sustained winds of **85 km/h** near the center, gustiness of up to **105 km/h**, and central pressure of **992 hPa** 

### **Present Movement**

### Eastward at 20 km/h

# **Extent of Tropical Cyclone Winds**

Strong winds or higher extend outwards up to 600 km from the center

# TROPICAL CYCLONE WIND SIGNALS IN EFFECT

No Tropical Cyclone Wind Signal is currently in effect.

Prepared by: SMRR

# TROPICAL CYCLONE BULLETIN NO. 9 Tropical Storm "MARING" (KOMPASU)

Issued at 5:00 PM, 09 October 2021 Valid for broadcast until the next bulletin at 11:00 PM today

### **HAZARDS AFFECTING LAND AREAS**

## **Heavy Rainfall**

- Today through tomorrow morning, moderate to heavy rains are possible over Western Visayas, Occidental Mindoro, and Palawan including Kalayaan, Calamian, and Cuyo Islands. Light to moderate with at times heavy rains are also possible over Bicol Region, Caraga, Oriental Mindoro, and the rest of Visayas.
- Under these conditions, isolated to scattered flooding (including flash floods) and rain-induced landslides are possible
  especially in areas that are highly or very highly susceptible to these hazard as identified in hazard maps

### **Severe Winds**

- Due to the expansive wind field of the tropical storm and the southwesterlies, occasional gusts reaching strong breeze
  to near gale in strength may still be experienced over Eastern and Western Visayas, Caraga, Catanduanes, Albay,
  and Sorsogon even in the absence of a wind signal.
- Current forecast scenario that there is moderate to high likelihood that Tropical Cyclone Wind Signal (TCWS) #1 will
  be hoisted for some localities in Northern Luzon beginning tonight or tomorrow in anticipation of the arrival of strong
  breeze to near gale conditions with higher gusts. The highest possible wind signal for this tropical cyclone remains
  TCWS #2.
- Due to the expansive wind field of "MARING", the uncertainty in its interaction and possible merging with Tropical Depression "NANDO", and the track and intensity forecast post-merger, there is a possibility that areas outside Northern Luzon may also be placed under TCWS and that a higher wind signal may still be hoisted within the forecast period.

## HAZARDS AFFECTING COASTAL WATERS

- Under the influence of Tropical Storm "MARING", a Gale Warning is in effect for the eastern seaboards of the country. For more information, refer to Gale Warning #3 issued at 5:00 PM today.
- In the next 24 hours, moderate to rough seas will prevail over the eastern seaboards of the country that are not under Gale Warning and the northern and western seaboards of Luzon. These conditions are risky for those using small seacrafts. Mariners are advised to take precautionary measures when venturing out to sea and, if possible, avoid navigating in these conditions.

# TRACK AND INTENSITY OUTLOOK

- Both "MARING" and Tropical Depression "NANDO" are presently embedded within the larger circulation of a
  monsoon depression. A near-term erratic movement remains likely within the next 24 hours as the circulations of
  both "MARING" and "NANDO" interact with each other in a potential merger event. Afterwards, the resulting merger,
  likely dominated by "MARING", is forecast to move generally west northwestward until Monday before turning
  westward by Tuesday. On the forecast track, the storm will cross the Luzon Strait and pass over or close to Batanes
  and Babuyan Islands between Monday evening and Tuesday morning.
- "MARING" may likely persist in the merger event with "NANDO", which may take place within the next 24 hours. The
  resulting merger cyclone is forecast to continue intensifying within the forecast period and may reach severe tropical
  storm category within 36 hours.
- Considering the trend of changes in the forecast scenario in previous bulletins and the uncertainty surrounding the interaction and merger event between "MARING" and "NANDO", there is a moderate to high likelihood that changes may still occur in the track and intensity outlook for this tropical cyclone in the next bulletin.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.

Unless superseded by an intermediate bulletin the next tropical cyclone bulletin will be issued at 11:00 PM today.
